

Enrollment Report 11-05-2014 18:16

Please find a list of errors below found in your student master system. Correct these before your districts transmission to DOE. DOE will return these errors to your district and they will accept no other data on these students until these errors are corrected including MFP counts. Code 28 errors indicate another school may have an active record on the same student. The conflicting school will be listed in the school column. The sending school may need a leave date in their student master. Code 11 and 33 errors indicate that the student is missing a special code. To correct these errors use the fast loader concept. Go to the special code loader under the loaders section on Student Master main screen. Use grade -1 for funding or 00 for experience in the setup. Make sure that the year, district and school is ok. Click any students blank 'SP' cell that has no funding or experience code and an 'X' will be placed in the cell. You may click multiple students. Then click the desired code from the list on the right which will replace the 'X' with a code and update the students special codes file. For Code 22 Errors, if the birth date is correct, you can enter the initials of the person who validated the birth certificate under the **Birth Date** Window, in the **Validated** field. When the initials are entered on this field, the student will no longer print with an suspicious birth date on this report This audit will run daily.
